

LUBRAGLIDE "CE" CO-POLYMER BEADS®

THERE IS A REASON FOR SIZING AND IT DOES MAKE A DIFFERENCE

LubraGlide Co-Polymer Beads have been screened to specific sizing since day one. The reason is simple, optimum sizing for optimum performance. When the PSD is too wide, the impact on performance is reduced. When the PSD is wrong, the potential for problems increases.

Sampling and analyzing "other brand" beads indicates that **over 33%** of beads classified as "coarse" are not only outside the Sun range, but are actually in the "fine" bead category. "Other beads" classified as "fine" have 10% outside Sun's tolerances with the majority falling into the "ultra fine" size range. The fractions that are too large for the "fine" category pose a potential problem for downhole tool tolerances.

Sun's LubraGlide Co-Polymer Beads provide you with PSD tolerances allowing you to control the sizing of the beads in your system for optimum performance and minimization of tool problems.

LubraGlide Co-Polymer Beads are engineered and manufactured in the U.S.A. to exact specifications exclusively by Sun Drilling Products, not imported from overseas and rebranded. **LubraGlide Co-Polymer Beads** are made specifically for the petroleum industry and not a by-product of another process. Always specify **LubraGlide Co-Polymer Beads** and accept no substitutes.
